

Topic: Time Management on Covid Era

Date: Aug 19, 2020

Name: John A Robles Perez

1. Identify a Problem	PLAN
We are facing and living hard times during these days because the coronavirus. The question is that students are managing their time efficiently? How can students improve in their daily task during these days?	
2. Set the Target	PLAN
My targets are the students or people who want to manage their own daily task efficiently in terms of time.	
3. Analyze the Causes	PLAN
This problem occurs because the coronavirus pandemic force many people to work from their homes by most of the companies to protect their employees. Also, students are forced to take their classes from their homes so to be able to continue their professional career during these times. Saying that, people need to schedule all daily task to track their goals efficiently.	

4. Propose & Implement Countermeasures	PLAN/DO
The idea will be developing an app that manage people daily task by setting many details before about your plans for a week or a month to be able to schedule task from a range given by the user. This app will run always in the background and also alarms notifications about the schedule are sent through the app.	
5. Check/Evaluate	CHECK
The app will run in Android and iOS with React Native and JavaScript. We will do some test at the end to be sure it is completed well.	
6. Act and/or Standardize	ACT
This project will help us to be more responsible and efficiently managing the time in the daily task.
